

Why is Information Security important?

Cyberattacks happen more often than you expect.

A cyberattack occurs every 39 seconds worldwide.

Global daily cyberattack occurrence

Since COVID-19 struck the U.S., the FBI reported a 300% increase in cybercrime.

Regulation is changing

The U.S. Securities and Exchange Commission (SEC) is expected to finalize its proposal requiring enterprises to demonstrate cybersecurity awareness and disclose information in 2023.

Cyberattacks

By 2025, cybercrimes are expected to cost the world \$10.5 trillion dollars.

In 2022 alone, the U.S. average data breach cost was \$9.44M.
Not to mention the cost of reputational damage.

How to be prepared.

Defense with a strategic approach

The Horváth information security framework provides:

- A holistic view of your information security landscape
- Comprehensive IT Security Strategy
- A systematic assessment of information security risks
- Tailor-made and cost-efficient mitigation strategies
- Sustainable methods to evolve security controls when risks, environment, or resources change
- Intensive insights on environment and regulation trends
- A streamlined management process, KPIs and reporting

Now what?
